

# KNOW YOUR RISK FOR PREDIABETES

## GET SCREENED TODAY

### American Indians are at higher risk for prediabetes.

Prediabetes means your blood sugar level is higher than normal, but not high enough to be diagnosed as diabetes.

Having prediabetes puts you at higher risk for developing type 2 diabetes, a disease that comes with serious health problems.

That's why it's important to know the risk factors.

## If you scored 5 or higher

You are at increased risk for having prediabetes and are at high risk for type 2 diabetes. However, only your doctor can tell for sure if you have type 2 diabetes or prediabetes, a condition in which blood sugar levels are higher than normal but not high enough yet to be diagnosed as type 2 diabetes. **Talk to your doctor to see if additional testing is needed.**

Type 2 diabetes is more common in African Americans, Hispanics/Latinos, American Indians, Asian Americans, and Pacific Islanders.

Higher body weight increases diabetes risk for everyone. Asian Americans are at increased risk for type 2 diabetes at lower weights (about 15 pounds lower than weights in the 1 Point column).

## You can reduce your risk for type 2 diabetes

Find out how you can reverse prediabetes and prevent type 2 diabetes through a **CDC-recognized lifestyle change program** at <https://www.cdc.gov/diabetes/prevention/lifestyle-program>.
